FIELD SERVICE BULLETIN

LANDING GEAR CONTROL HANDLE LOCK INSTALLATION

In order to prevent the inadvertent operation of the landing gear control handle, a lock, provided in 145-89015 kit, should be installed as shown, on airplanes not having the lock.

If landing gear control handle lock interferes with hydraulic pump handle, remove handle and open bend to obtain adequate clearance.

Time required to make this installation should not exceed one man-hour.

NOTE: If you have sold your NAVion, please return this kit to the factory with name and address of the new owner.

John W. Casey
